

## **AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

### **LISTING OF CLAIMS:**

1-12 (canceled).

13. (previously presented): A hard coat film comprising a substrate and a hard coat layer, wherein the hard coat layer is formed by applying on the substrate a curable composition containing a photocurable substance, an oligomer type photopolymerization initiator, and a filler that provides a non-glaring property,

wherein a pressure-sensitive adhesive layer is formed for fitting the hard coat film to an adherent,

wherein the filler is present in a ratio of 0.5 to 50 parts by weight per 100 parts by weight of the photocurable substance, and

wherein the curable composition is cured by light irradiation.

14 (currently amended): The hard coat film as claimed in claim 13, wherein the thickness of the pressure-sensitive adhesive is from 5 to 100 micrometers.

15 (currently amended): The hard coat film as claimed in claim 13, wherein the substrate is printed and then the hard coat layer and the pressure-sensitive adhesive layer are formed.

16 (currently amended): The hard coat film as claimed in claim 13, wherein the pressure-sensitive adhesive layer is printed.

Appln. No.: 10/086,243  
Amendment under 37 C.F.R. § 1.111

17. (new): The hard coat film as claimed in claim 13, wherein the oligomer type photopolymerization initiator is represented by formula (1):

wherein Y is a linear or branched alkylene group, R<sup>1</sup> and R<sup>2</sup> are a linear or branched alkyl group, and n is an integer of 2 to 50.
